

Topic 7 — Call Routing & SIP Trunks

Assessment & Evidence Report

Agent: Trainee_Sarah_Receptionist

Softphone: MicroSIP + Linphone SIP account

1. Completed Evidence

Item	Status	Evidence
MicroSIP installation	PASS	Desktop softphone installed and opened successfully.
SIP account registration	PASS	MicroSIP displayed Online.
Linphone SIP account	PASS	Account registered through sip.linphone.org.
Retell receptionist agent	PASS	Trainee_Sarah_Receptionist reviewed.
Retell Phone Numbers	PASS	Page reviewed; currently empty.
Retell SIP trunk	BLOCKED	Requires a real phone number, termination URI and SIP credentials.
Inbound SIP/PSTN call	NOT RUN	No provisioned Retell number/trunk available.
Telephony call logs	NOT AVAILABLE	No inbound phone call exists to generate logs.

2. SIP Trunk Limitation

The Retell “Connect to your number via SIP trunking” form was reviewed, but no values were entered. The form requires an E.164 phone number, termination URI, SIP trunk username and password. No provider-issued trunk credentials were available, so no fake values were used.

3. Evidence Files

- microsip-registered.png — MicroSIP Online status.
- retell-agent-config.png — Retell agent configuration.
- microsip-sip-account.png — MicroSIP SIP account screen.

4. Final Status

PARTIAL / BLOCKED BY TELEPHONY DEPENDENCY. Softphone registration and Retell agent preparation are documented. Full SIP trunk and inbound call routing cannot honestly be marked complete without a real SIP provider/trunk and phone number.

Loom Demonstration Script

0:00–0:10 — Introduce Topic 7 and the SIP softphone demonstration.

0:10–0:30 — Show MicroSIP and point out the Online status.

0:30–0:45 — Show the SIP account screen; keep the password hidden.

0:45–1:05 — Open Retell Agents and show Trainee_Sarah_Receptionist.

1:05–1:25 — Open Retell Phone Numbers and show that no number is provisioned.

1:25–1:45 — Briefly show the SIP trunk form and explain its required real provider details. Do not enter fake credentials.

1:45–2:00 — State that the remaining inbound SIP routing test is blocked by the lack of a real SIP trunk and phone number.

Suggested Closing

“This completes the available SIP softphone and Retell configuration evidence for Topic 7. The remaining inbound SIP routing test depends on a real SIP trunk and phone number, so I have not represented that portion as completed.”
